To make an avatar, multiply
a human by 1.8?

Not so fast! While it's true that
the average height of a human is
1.75m, the average height of an alien is
1.8m.

WHAT'S YOUR AVATAR SHOE SIZE?

AVATARS

Na'vi and avatars look like the actors who play them

Because avatars are a blend of human and Na'vi DNA, they look like their human operators. Jake's avatar may have a blue face and feline ears, but he still resembles Jake.

The same is true for the Na'vi. They look like the actors who portray them, even though those actors are never seen in human form. This helped the film's computer graphics artists make the characters more realistic.

By capturing the expressions of the actors, the CG team was able to create Na'vi characters that looked like the actors who played them.

Let's see what you can do with a little bit of Na'vi DNA.

PANDORA IS A MOON, NOT A PLANET

Avatar is set on Pandora. Although similar in size to Earth, Pandora doesn't orbit a star, it orbits a planet—a gas giant named Polypheumus that fills much of Pandora's sky day and night.

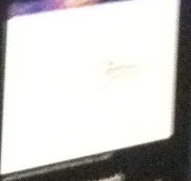

Fourteen moons orbit the gas giant Polypheumus.

Two moons orbit the first moon, L'Arrance.

ALPHA CENTAURI is 4.2 light-years from Earth.

It takes six years to reach Pandora using the most advanced rocket (maglev).

Alpha Centauri is 4.2 light-years from Earth.

L'Arrance is 1.5 light-years from Earth.
